Assignment #1

The objective of this problem is to extend the app we built to support multiple attributes. Your task is to define a model for your favorite car. Your app must allow for the creation and display of a car object with various attributes that best describe the car. Your implementation must include at least 15 attributes ranging from color, model, serial number, dimensions, etc. Your data types will be made up of string types. A picture of the car must be uploaded during creation and displayed during the display step.

Due 9/14 at 11:59 pm to be uploaded to Blackboard
